Part B • Listening, Reading and Writing

LISTENING

1 [Audio UT6.01] Listen to two teachers talking about things that have gone wrong in their language school. Number the topics (A–E) in the order they are mentioned.

A Mistakes are made by everyone on occasion. ___
B A mistake might have cost someone their job. ___
C An unfortunate mistake resulted in an expert getting annoyed. ___
D A mistake was made when setting a task for some students. ___
E One particular mistake had an economic cost attached to it. ___

/5

2 [Audio UT6.01] Listen again. Choose the correct answer (A, B or C).

1 How did Sophie feel about the results her students got in an exam?
A She was surprised that they hadn't done as well as she expected.
B She was pleased that they had achieved such high marks.
C She was annoyed that they had done so badly.

2 Why did Alan decide to put a plastic sheet in the photocopier?
A He needed to use an OHP because the computer projector wasn't working.
B He had been asked to do so by the director of the language school.
C He made the assumption that he would be able to do it correctly.

3 What was the result of Alan trying to print on a plastic sheet?
A The director told him not to use either of the photocopiers again.
B His colleagues were unable to use the photocopiers for some time afterwards.
C He was able to use the photocopier when it had stopped overheating.

4 What was Alan taught by the incident with the photocopier?
A You shouldn't get embarrassed about making mistakes at work.
B You should avoid blaming other people for things that go wrong.
C You should be careful about who is allowed to use technology.

5 What does Sophie say about a mistake the director made?
A It happened because he was trying to connect two electronic devices.
B It resulted in him uploading thousands of documents to the server.
C It was impossible for Robbie to locate the files in either the computer or the server.

/10

READING

3 Read an article in which three family members discuss technology. Tick the points (1–6) which are mentioned.

1 Some of the teachers in Mina's school are opposed to using digital technology. ___
2 Mina has changed her mind about the value of learning coding at school. ___
3 Simon sometimes gets annoyed with the way Mina refers to him. ___
4 Simon prefers more traditional ways of preparing economic forecasts. ___
5 Violet has found it hard to get used to technology because of her age. ___
6 Violet is concerned for elderly people who may not be able to access important services. ___

/6

What does technology mean to you?

Three generations of the same family tell us what technology means to them.

The daughter: Mina, 17, student

I'm what's known as a digital native, which means I've been brought up surrounded by internet technology. Because of that, it's hard to imagine life without it. At school it's used in almost all the subjects because digital skills are considered so important. Not only can we access huge amounts of information, but it also allows us to reinforce the concepts we learn with online exercises. Although some of the teachers struggle with it, the school insists that all our homework is assigned via the school's platform as well as being used for communication between teachers, pupils and parents. I can certainly see how it's a more effective way of keeping people informed.

We're also being taught coding at school, which has been an interesting experience. At first, I couldn't see the point because I didn't want to be a programmer. Not only that, but I found it hard because you have to be so precise when you're inputting code. I've never had an eye for detail so I was always slipping up and it would take me ages to identify the error. Lately, though, I've started to get into it a bit more and I can see why it might be useful in future. People forget that a lot of us digital natives know little more than how to swipe left and right on a phone, so it can't be a bad thing if we learn how the technology actually works.

The father: Simon, 49, economist
Mina always makes the assumption that I don't know anything about computers because of my age. She calls me a 'digital foreigner' because she knows it rubs me up the wrong way! The fact is that, although the internet hadn't been invented when I was a child, I did grow up with computers. In those days, you had to program the games yourself and I'd spend hours carefully typing in code. That's probably more than can be said for today's generation of youngsters. Nevertheless, computers have evolved enormously and they're capable of processing much more information nowadays. My field of work has been revolutionised by computers because they do all the economic forecasting for us. We determine the factors that need to be taken into account, but the programs do all the hard work, which would have been done with pencil and paper in the old days. We shouldn't place too much trust in technology, though, because things can go wrong. Only a few weeks ago did our software generate a report which made no sense at all. That said, it's been proven that humans are far more likely to miscalculate when it comes to economics than computers are.

The grandmother: Violet, 76, volunteer
Although I'm a bit of a dinosaur, not only am I used to technology, but I've even got a virtual PA on my smartphone which syncs with my tablet and my smartwatch. Never before have I been so organised because reminders are sent straight to my smartwatch. I also find it handy for keeping up with friends, especially through social media. We used to have to call people or send them a letter to keep in touch, but now we can see what's happening in each other's lives almost in real time. For me, the increased speed and ease of communication is the most exciting aspect of technology. It must be hard for digital natives like Mina to really appreciate how much this has changed the world.

On the other hand, we often forget that some people have been left behind. In particular, I'm thinking about some of the elderly people I do voluntary work with. My role is to help them get the support and services which they have a right to, but they often struggle with the online procedures. Not only do issues like poor eyesight make websites difficult to read, but they also tend to make more mistakes than younger users. For those reasons, it's essential that technology is accessible to everyone. Under no circumstances should people's lives be made harder because of it.

4 Read the article again. Are the statements True (T) or False (F)?

1 Mina thinks technology can help her strengthen her understanding of the ideas she learns at school. **T** / **F**
2 Mina has never found it hard to accurately enter information into a computer. **T** / **F**
3 Mina and Simon agree that some young people lack technological skills. **T** / **F**
4 Simon is impressed with the way computers are able to deal with large amounts of information. **T** / **F**
5 Simon is not convinced by the argument that humans are more prone to errors than computers. **T** / **F**
6 Simon and Violet both have a negative attitude towards technological development. **T** / **F**
7 Violet lacks confidence when it comes to using different electronic devices. **T** / **F**
8 Violet believes that technology has made it easier for people with visual problems to access information. **T** / **F**
9 Violet and Mina have a similar opinion about how technology makes it easier for people to communicate. **T** / **F**

/9

WRITING

5 Match 1–5 with a–e to complete the formal phrases for complaining.

1 Please see the ___
2 I am sure you understand my frustration ___
3 I am writing to express my considerable ___
4 I look forward to hearing ___
5 It was clear that the product was not ___

a at not having been informed of the delivery date.
b fit for purpose.
c disappointment with your service.
d from you soon regarding this matter.
e attached order form for confirmation.

/5

6 You have recently signed up to a new internet provider and you are disappointed with the service. Write an email of complaint stating:

- **why you are writing.**
- **what the problems are.**
- **what the desired outcomes are.**

Write 200–260 words.

Part C • Speaking

SPEAKING

1 Describe and compare the pictures showing people who have made mistakes. What mistake do you think the people might have made?

/15

2 Answer your partner's question.

/5

3 Listen to your partner talk about their pictures. Ask: What problems might the people have when using these forms of technology?

Total: /20
