Cool Jobs: The Fruit Picker
By Enrique Santos

1 ___
I work on fruit farms, helping to collect the fruit when they're ready. Some people prefer to work with certain kinds of fruit, like apples or pears, but I'm willing to work with anything. I spend all day in an orchard, which is the place where the fruit trees are, choosing the best fruit. They normally have to be the right colour and I have to fill big boxes with them as quickly as I can. I'm not allowed to damage the fruit so I have to be really careful.

2 ___
I've been picking fruit for the last five years, but I worked in a delivery warehouse before that. I was in charge of a team picking products to send to homes and businesses. It wasn't a bad job and the conditions were quite good. However, I wanted to get out and see the world so I decided to go travelling with a friend. We didn't intend to do fruit picking, but we ran out of money in New Zealand and we needed to get a job. When someone offered us the chance to work on their farm, we accepted straightaway.

3 ___
Fruit picking is hard work and, unless you have some experience, you make mistakes. Even if you've picked a lot of fruit, you won't get paid if the fruit is not good enough. When I started, a lot of pickers were exploited by farmers. They would sometimes pretend you hadn't picked enough so they didn't pay you the right amount. However, most farms have to give you a temporary contract nowadays, so the conditions are better. In fact, I know some experienced fruit pickers who earn quite a lot of money.

4 ___
If I wasn't moving around, I wouldn't choose fruit picking as a career. There are plenty of other jobs with better conditions. However, if you want to travel the world, it's one of the best jobs you can do. For me, travelling is all about appreciating the countryside and meeting new people. Fruit picking allows you to do that. If I still worked in a warehouse, I wouldn't have that opportunity.

5 ___
I've met all sorts of people who do this job, but I wouldn't recommend it for anyone with a family. The conditions can be irregular and you can't always keep to a routine. You also need to avoid distractions because you only get paid for what you pick. Finally, you need to be healthy because going up and down a ladder all day is hard work. For those reasons, the job is most appropriate for enthusiastic young people without other responsibilities.

5 Read the article again. Choose the correct answer (A, B, C or D).

1 What does the writer say about fruit picking in the first paragraph?
A He would rather pick apples or pears.
B He will work as a fruit picker in the future.
C He can fill the fruit boxes very quickly.
D He has to handle the fruit with care.

2 Why did the writer become a fruit picker?
A He lost his job working in a warehouse.
B He wanted to use his experience of picking.
C It was an opportunity to earn some money.
D It allowed him to leave his job and go travelling.

3 What difficulties does the writer discuss in the third paragraph?
A Fruit pickers don't get paid if they make mistakes.
B Fruit pickers are often treated unfairly by farmers.
C It's not common for fruit pickers to get contracts.
D It's impossible to earn much money as a fruit picker.

4 How does the writer feel about his job?
A He is disappointed about the conditions.
B He is pleased to have the chance to travel.
C He doesn't like moving around all the time.
D He looks forward to working in a warehouse again.

5 What sort of people should fruit pickers be?
A People who have family responsibilities.
B People who can keep to a routine.
C People who don't mind distractions.
D People who are fit and flexible.

The Mechanical Turk

The 'Mechanical Turk' was a robot chess player, designed by the Hungarian inventor Wolfgang von Kempelen. In 1769, he was asked to attend a magic show for the Austrian ruler, Maria Theresa. However, Kempelen thought the magic was disappointing and promised to do something better. For the next six months, he worked on a robot chess player, which looked like a human. In 1770, he was ready to give the Mechanical Turk its first public demonstration.

The machine was like a full-size person dressed in traditional Turkish clothing. It stood at a chess board, its wooden arms ready to move the pieces. The chess board was placed on a cabinet, which was like a large box with various doors and drawers. Inside the cabinet, there were complicated parts, which were meant to control the machine. With its moving eyes and head, the robot appeared to think carefully before moving the pieces. It was a big hit with Maria Theresa and it soon toured Europe, impressing audiences.

It's important to remember that robots didn't exist in the eighteenth century, so people found the Mechanical Turk extraordinary. Audiences were invited to open the doors and examine the machine, but no one understood how it worked. Kempelen also had another box which he looked in from time to time. It was a distraction and didn't actually do anything. Kempelen just wanted the audience to believe there was something special in the box. In 1784, a writer described how people were terrified of the machine because they thought there was powerful magic at work.

In 1804, Kempelen died, but few people knew the truth about the machine. When its new owner, Johann Mälzel, invented a voice box for the machine, people became even more curious about it. The American author Edgar Allen Poe suggested there was someone inside the body of the robot, moving the arms. Others claimed that a small child was inside the cabinet, although they couldn't explain how a child could play chess so well. Although the Mechanical Turk didn't always win, it had always been a challenge, even for good chess players.

The Mechanical Turk toured all over the world, eventually ending up in the United States. By the 1840s, it had been bought and sold several times. Its last owner, John Mitchell, repaired and cleaned up the machine before putting it in a museum in Baltimore. Unfortunately, in 1854 the museum caught fire and the machine was destroyed. It was only then that the owners came clean and explained the secret of the machine. Its clever design had allowed a professional chess player to sit inside and control it. Even if it was opened, the player couldn't be seen. Incredibly, audiences had been deceived by this fake machine for more than 80 years.

7 Read the article again. Are the statements True (T) or False (F)?

1 Kempelen had a bad opinion of Maria Theresa's magic show. **T** / **F**
2 Other robots had already been created in the 18th century. **T** / **F**
3 Kempelen pretended to show people how the machine worked. **T** / **F**
4 Kempelen decided to tell everyone how the machine worked in 1804. **T** / **F**
5 An American writer discovered the truth about the machine. **T** / **F**
6 The machine was last shown to the public in the United States. **T** / **F**
7 The chess player hiding in the machine could be seen if the cabinet was opened. **T** / **F**
